A

Accessory pathway
hyperkalemia and Wolff-Parkinson-White type preexcitation syndrome, 2:183-188

Action potential
cardiac cell action potential duration is dependent upon induced changes in free Ca2+ activity during pH changes in vitro, 2:143-154

Action potentials
effects of tocainide on Purkinje fibers from normal and infarcted ventricular tissues, 4:355-360
pathophysiological mechanisms of altered transmembrane potentials in diseased human atria, 1:41-50

Acute myocardial infarction, diagnosis of
experiences from the use of 24 precordial chest leads in suspected acute myocardial infarction, 4:381-388

Acute myocardial ischemia
effects of collateral circulation on electrophysiological properties during the acute phase of canine myocardial infarction, 2:173-182
alternation in refractoriness and in conduction delay in the ischemic myocardium associated with the alternation in the ST-T complex during acute coronary occlusion in anesthetized dogs, 1:77-84

Angiography
prediction of sudden death from QTc interval prolongation in patients with chronic ischemic heart disease, 3:203-212

Animal studies
a comparison of ST segment deviation and calculated solid angle during acute regional ischemia in the isolated canine heart at precordial, epicardial and intramyocardial lead surfaces, 3:235-246
effects of collateral circulation on electrophysiological properties during the acute phase of canine myocardial infarction, 2:173-182
the circumflex coronary artery occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164
the role of Phospholipase in the genesis of reperfusion arrhythmia, 2:165-172

Arrhythmias
in vitro characteristics of repolarization abnormality — a possible cause of arrhythmias, 4:361-370
the circumflex coronary occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164

Atrial
fibrillation threshold
increased cyclic GMP in atrial fibrillation, 1:51-58
spontaneous directional change of F waves in atrial flutter, 4:397-398
myocardial cells
pathophysiological mechanisms of altered transmembrane potentials in diseased human atria, 1:41-50
sarcolemma
pathophysiological mechanisms of altered transmembrane potentials in diseased human atria, 1:41-50

Atrioventricular nodal conduction
effects of autonomic blockade on dual atrioventricular nodal pathways pattern, 3:269-274

Autonomic nervous system
effects of autonomic blockade on dual atrioventricular nodal pathways pattern, 3:269-274

B

Bicarbonate
cardiac cell action potential duration is dependent upon induced changes in free Ca2+ activity during pH changes in vitro, 2:143-154

Body surface potential maps
body surface potential maps in old inferior myocardial infarction. assessment of diagnostic criteria, 3:225-234

Brody effect
Brody's effect: when not to invoke it. 3:306 (abstract)

C

Calcium antagonist
alternation in refractoriness and in conduction delay in the ischemic myocardium associated with the alternation in the ST-T complex during acute coronary occlusion in anesthetized dogs, 1:77-84

Calcium channel blockers
effects of oral diltiazem on ventricular premature contractions, 1:59-66

Calcium ion
cardiac cell action potential duration is dependent upon induced changes in free Ca2+ activity during pH changes in vitro, 2:143-154

Cardiac electrophysiology
determination of the spatial and intensity properties of atrial repolarization potentials in the dog, 2:99-108

Cardiac ventricular cell
cardiac cell action potential duration is dependent upon induced changes in free Ca2+ activity during pH changes in vitro, 2:143-154

Cardiotoxicity
new electrocardiographic criteria for tricyclic antidepresssant cardiotoxicity: Bayes' Theorem, 3:309 (abstract)

Children
the normal pediatric Frank orthogonal electrocardiogram: influence of weight, height and chest circumference 1:15-22
the normal pediatric Frank orthogonal electrocardiogram: variations according to age and sex, 1:1-14

Chronic aortic valve disease
diagnostic implications of figure-of-eight and clockwise QRS loop rotations on the horizontal vectorcardiogram in chronic aortic valve disease, 2:123-130

Circumflex coronary artery
the circumflex coronary artery occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164

Clinical electrophysiology
effects of autonomic blockade on dual atrioventricular nodal pathways pattern, 3:269-274

Complete atrioventricular block
second degree type II and complete atrioventricular block due to hyperkalemia, 4:393-396

Computer
analysis
the normal pediatric Frank orthogonal electrocardiogram: influence of weight, height and chest circumference 1:15-22
the normal pediatric Frank orthogonal electrocardiogram: variations according to age and sex, 1:1-14
ST segment measurement
a modified treadmill exercise protocol for computer-assisted analysis of the ST segment/heart rate slope: methods and reproducibility, 4:311-318

Concealed bigeminy
mechanisms of concealed ventricular bigeminy: the concept of concealed conduction in the reentrant pathway, 1:67-76

Concealed conduction
mechanisms of concealed ventricular bigeminy: the concept of concealed conduction in the reentrant pathway, 1:67-76

Conduction delay
alternation in refractoriness and in conduction delay in the ischemic myocardium associated with the alternation in the ST-T complex during acute coronary occlusion in anesthetized dogs, 1:77-84

Conduction disturbances
hyperkalemic left bundle branch block and hyporeninemic hypoaldosteronism (hyperkalemic left bundle branch block), 1:93-96

Conductivity
magnitude and location of a dipole in a circular ring with non-insulating boundaries, 4:347-354

Coronary
arteriogram
T loop in posterior myocardial infarction: a useful clue to vectorcardiographic diagnosis, 2:109-114
artery disease
high frequency electrocardiography using an advanced method of signal averaging for non-invasive detection of coronary artery disease in patients with normal conventional electrocardiogram, 4:371-380
artery disease, identification of
the treadmill exercise score improves identification and quantification of coronary artery disease, 3:307 (abstract)
artery occlusion
a comparison of ST segment deviation and calculated solid angle during acute regional ischemia in the isolated canine heart at precordial, epicardial and intramyocardial lead surfaces, 3:235-246
embolization
effects of collateral circulation on electrophysiological properties during the acute phase of canine myocardial infarction, 2:173-182
risk indicators
the orthogonal electrocardiogram as risk indicator for the prediction of myocardial infarction and/or cardiac death, 4:327-336

Cryomapping
simultaneous appearance of endocardial late potentials and ability to induce sustained ventricular tachycardia after procainamide administration, 2:197-202

Cumulated CK release
a comparison of cumulated CK release with three vectorcardiographic methods of estimating myocardial infarct size, 4:337-346

Cycle length change
periodic changes in cycle length of ventricular tachycardia: a Wenckebach type exit block? 4:389-392

Cyclic AMP
increased cyclic GMP in atrial fibrillation, 1:51-58

Cytochemistry
pathophysiological mechanisms of altered transmembrane potentials in diseased human atria, 1:41-50

D

Deviation index isointegral maps
body surface potential maps in old inferior myocardial infarction. Assessment of diagnostic criteria, 3:225-234

Diagnosis
experiences from the use of 24 precordial leads in suspected acute myocardial infarction. 4:381-388

Dibutyryl cyclic GMP
increased cyclic GMP in atrial fibrillation, 1:51-58

Dipole moment
magnitude and location of a dipole in a circular ring with non-insulating boundaries, 4:347-354

Dual atrioventricular nodal pathways pattern
effects of autonomic blockade on dual atrioventricular nodal pathways pattern, 3:269-274

E

ECG analysis
serial comparison in the Glasgow ECG analysis program, 3:309 (abstract)

ECG analysis, automated programs for
circumflex occlusion and posterior myocardial infarction: diagnostic criteria and automated ECG analysis programs, 3:307 (abstract)

ECG criteria, reliability of
reliability of the ECG criteria for lateral myocardial infarction, 3:306 (abstract)

ECG monitoring, home
home ECG monitoring of the patient with ventricular arrhythmias, 3:308 (abstract)

ECG sampling rates
determination of ECG sampling rates based on measurement accuracy, 3:309 (abstract)

Ectopic conduction
evidence for ectopic conduction in vivo and in vitro, 3:310 (abstract)

Electric heart vector
comparative study of the normal vector magnetocardiogram and vector electrocardiogram, 3:275-290

Electrical alternation
alternation in refractoriness and in conduction delay in the ischemic myocardium associated with the alternation in the ST-T complex during acute coronary occlusion in anesthetized dogs, 1:77-84

Electrocardiography
determination of the spatial and intensity properties of atrial repolarization potentials in the dog, 2:99-108
effect of the heart-lung boundary on the magnetocardiogram, 1:23-32
electrocardiographic diagnosis of posterior myocardial infarction revisited: a new approach using a multivariate discriminant analysis and Thallium-201 myocardial scintigraphy, 1:33-40
the electrocardiogram often fails to identify pericarditis after percutaneous transluminal coronary angioplasty, 4:399-402

Electrogram mapping
simultaneous appearance of endocardial late potentials and ability to induce sustained ventricular tachycardia after procainamide administration, 2:197-202

Electron microscope
pathophysiological mechanisms of altered transmembrane potentials in diseased human atria, 1:41-50

Electrophysiology
effects of collateral circulation on electrophysiological properties during the acute phase of canine myocardial infarction, 2:173-182

Endocardial potentials
magnitude and location of a dipole in a circular ring with non-insulating boundaries, 4:347-354

Escape rhythm
escape rhythm paroxysmal tachyarrhythmia originating from the right bundle, 3:295-298

Exercise test
the cardiointegram: detection of coronary artery disease in males with chest pain and a normal resting electrocardiogram, 3:257-268

Exercise testing
exercise P-vector magnitude changes in angina pectoris: Frank-vectorcardiographic and hemodynamic correlations, 2:115-122
exercise testing and thallium-201 myocardial perfusion scintigraphy in the clinical evaluation of patients with Wolff-Parkinson-White syndrome, 4:319-326
simultaneous Holter recording during graded exercise stress testing to validate ST segment reproduction and computer-assisted ST segment analysis, 3:307 (abstract)
the treadmill exercise score improves identification and quantification of coronary artery disease, 3:307 (abstract)

F

F waves
spontaneous directional change of F waves in atrial flutter, 4:397-398

Frank vectorcardiogram
exercise P-vector magnitude changes in angina pectoris:
Frank-vectorcardiographic and hemodynamic correlations, 2:115-122

H

Heart-lung boundary
effect of the heart-lung boundary on the magnetocardiogram, 1:23-32

Hemiblock, left anterior
left anterior hemiblock masking the diagnosis of right bundle branch block, 1:97-98

Hepes buffer
cardiac cell action potential duration is dependent upon induced changes in free Ca2+ activity during pH changes in vitro, 2:143-154

High frequency electrocardiography
high frequency electrocardiography using an advanced method of signal averaging for non-invasive detection of coronary artery disease in patients with normal conventional electrocardiogram, 4:371-380

Holter ECG
effects of oral diltiazem on ventricular premature contractions, 1:59-66

Holter recording
simultaneous Holter recording during graded exercise stress testing to validate ST segment reproduction and computer-assisted ST segment analysis, 3:307 (abstract)

Horizontal QRS loop rotations
diagnostic implications of figure-of-eight and clockwise QRS loop rotations on the horizontal vectorcardiogram in chronic aortic valve disease, 2:123-130

Hyperkalemia
hyperkalemic left bundle branch block and hyporeninemic hypoaldosteronism (hyperkalemic left bundle branch block), 1:93-96
second degree type II and complete atrioventricular block due to hyperkalemia, 4:393-396

Hyperkalemia-induced conduction defects
second degree type II and complete atrioventricular block due to hyperkalemia, 4:393-396

Hypertrophy, left ventricular
electrocardiographic detection of concentric and eccentric left ventricular hypertrophy, 3:306 (abstract)

Hyperventilation test
increasing pre-excitation ("concertina effect") during vasospastic angina, 3:299-302

Hyporeninemic hypoaldosteronism
hyperkalemic left bundle branch block and hyporeninemic hypoaldosteronism (hyperkalemic left bundle branch block), 1:93-96

I

Infarct evolution
a comparison of cumulated CK release with three vectorcardiographic methods of estimating myocardial infarct size, 4:337-346

Infarct size
a comparison of cumulated CK release with three vectorcardiographic methods of estimating myocardial infarct size, 4:337-346

Infarction, myocardial
limitations of premature ventricular complex morphology in the diagnosis of myocardial infarction, 2:131-136

Infarction, myocardial, inferior
body surface potential maps in old inferior myocardial infarction. Assessment of diagnostic criteria, 3:225-234

Inhomogeneity
magnitude and location of a dipole in a circular ring with non-insulating boundaries, 4:347-354

Interpolated extrasystoles
mechanisms of concealed ventricular bigeminy: the concept of concealed conduction in the reentrant pathway, 1:67-76

Ischemic heart disease
prediction of sudden death from QTc interval prolongation in patients with chronic ischemic heart disease, 3:203-212

L

Late potential
simultaneous appearance of endocardial late potentials and ability to induce sustained ventricular tachycardia after procainamide administration, 2:197-202

Left bundle branch block
hyperkalemic left bundle branch block and hyporeninemic hypoaldosteronism (hyperkalemic left bundle branch block), 1:93-96

Left ventriculogram
T loop in posterior myocardial infarction: a useful clue to vectorcardiographic diagnosis, 2:109-114

M

Magnetic heart vector
comparative study of the normal vector magnetocardiogram and vector electrocardiogram, 3:275-290

Magnetocardiography
effect of the heart-lung boundary on the magnetocardiogram, 1:23-32

Mechanisms
spontaneous directional change of F waves in atrial flutter, 4:397-398

Membrane potentials
pathophysiological mechanisms of altered transmembrane potentials in diseased human atria, 1:41-50

Modelling
modelling of complex structures and phenomena in cardiac electrophysiology using rule based expert systems, 3:310 (abstract)

Monophasic action potential
alternation in refractoriness and in conduction delay in the ischemic myocardium associated with the alternation in the ST-T complex during acute coronary occlusion in anesthetized dogs, 1:77-84

Multilevel block
mechanisms of concealed ventricular bigeminy: the concept of concealed conduction in the reentrant pathway, 1:67-76

Multivariate analysis
the orthogonal electrocardiogram as risk indicator for the prediction of myocardial infarction and/or cardiac death, 4:327-336

Myocardial infarct size
QRS criteria to estimate myocardial infarct size, 3:310 (abstract)

Myocardial ischemia
non-invasive detection of coronary artery disease by body surface electrocardiographic mapping after dipyridamole infusion, 3:213-224

Myocardial perfusion
exercise testing and thallium-201 myocardial perfusion scintigraphy in the clinical evaluation of patients with Wolff-Parkinson-White syndrome, 4:319-326

Myocardial scintigraphy
limitations of premature ventricular complex morphology in the diagnosis of myocardial infarction, 2:131

N

Non-invasive test
the cardiointegram: detection of coronary artery disease in males with chest pain and a normal resting electrocardiogram, 3:257-268

Normal limits
the normal pediatric Frank orthogonal electrocardiogram: variations according to age and sex, 1:1-14

O

Overdrive-acceleration
effects of oral diltiazem on ventricular premature contractions, 1:59-66

P

P waves
determination of the spatial and intensity properties of atrial repolarization potentials in the dog, 2:99-108

Paroxysmal tachycardia
distinguishing sinus from paroxysmal tachycardia by rate of onset, 3:309 (abstract)

Paroxysmal supraventricular tachycardia
paroxysmal supraventricular tachycardia initiated by a swallowing-induced premature atrial beat, 2:193-196

Pathways, nodal, multiple
triple antegrade nodal pathway in a patient with supraventricular paroxysmal tachycardia, 1:85-90

Pediatric VCG
the normal pediatric Frank orthogonal electrocardiogram: influence of weight, height and chest circumference, 1:15-22

Pericarditis
the electrocardiogram often fails to identify pericarditis after percutaneous transluminal coronary angioplasty, 4:399-402

Phosphate
cardiac cell action potential duration is dependent upon induced changes in free Ca2+ activity during pH changes in vitro, 2:143-154

Phospholipase
the role of Phospholipase in the genesis of reperfusion arrhythmia, 2:165-172

Postectopic normalization
postectopic u wave normalization, 3:303-304

Posterior myocardial infarction
electrocardiographic diagnosis of posterior myocardial infarction revisited: a new approach using a multivariate discriminant analysis and Thallium-201 myocardial scintigraphy, 1:33-40
T loop in posterior myocardial infarction: a useful clue to vectorcardiographic diagnosis, 2:109-114

Potassium
hyperkalemia and Wolff-Parkinson-White type preexcitation syndrome, 2:183-188

Potential-time integral analysis
body surface potential maps in old inferior myocardial infarction. Assessment of diagnostic criteria, 3:225-234

Precordial mapping
experiences from the use of 24 precordial chest leads in suspected acute myocardial infarction, 4:381-388

Premature atrial beats
paroxysmal supraventricular tachycardia initiated by a swallowing-induced premature atrial beat, 2:193-196

Premature atrial stimulation
sinus node pacemaker shift: a phenomenon induced by premature atrial stimulation in man? 2:137-142

Premature ventricular complex
limitations of premature ventricular complex morphology in the diagnosis of myocardial infarction, 2:131-136

Prinzmetal's angina
increasing pre-excitation ("concertina effect") during vasospastic angina, 3:299-302

Procainamide
simultaneous appearance of endocardial late potentials and ability to induce sustained ventricular tachycardia after procainamide administration, 2:197-202

PTCA complications
the electrocardiogram often fails to identify pericarditis after percutaneous transluminal coronary angioplasty, 4:399-402

Purkinje fibers
in vitro characteristics of repolarization abnormality—a possible cause of arrhythmias, 4:361-370

P-vector magnitude changes
exercise P-vector magnitude changes in angina pectoris Frank-vectorcardiographic and hemodynamic correlations, 2:115-122

Q

Q wave, criteria for infarction
multivariate Q wave criteria for inferior myocardial infarction, 3:306 (abstract)

QTc interval prolonged
prediction of sudden death from QTc interval prolongation in patients with chronic ischemic heart disease, 3:203-212

QRS changes
a comparison of cumulated CK release with three vectorcardiographic methods of estimating myocardial infarct size, 4:337-346

QRS voltage parameters
assessment of left ventricular hypertrophy by ECG and VCG in patients with inferior and posterior myocardial infarction. A comparison with echocardiographic data, 3:247-256

Quantitative angiocardiographic data
diagnostic implications of figure-of-eight and clockwise QRS loop rotations on the horizontal vectorcardiogram in chronic aortic valve disease, 2:123-130

R

R wave
the circumflex coronary artery occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164

Reentrant ventricular tachycardia
simultaneous appearance of endocardial late potentials and ability to induce sustained ventricular tachycardia after procainamide administration, 2:197-202

Refractoriness
alternation in refractoriness and in conduction delay in the ischemic myocardium associated with the alternation in the ST-T complex during acute coronary occlusion in anesthetized dogs, 1:77-84
effects of tocainide on Purkinje fibers from normal and infarcted ventricular tissues, 4:355-360

Reperfusion arrhythmias
the role of Phospholipase in the genesis of reperfusion arrhythmia, 2:165-172

Repolarization
effects of tocainide on Purkinje fibers from normal and infarcted ventricular tissues, 4:355-360
in vitro characteristics of repolarization abnormality—a possible cause of arrhythmias, 4:361-370

Right bundle branch
escape rhythm and paroxysmal tachyarrhythmia originating from the right bundle, 3:295-298

Right bundle branch block
left anterior hemiblock masking the diagnosis of right bundle branch block, 1:97-98

S

Second degree type II atrioventricular block
second degree type II and complete atrioventricular block due to hyperkalemia, 4:393-396

Secondary sources
effect of the heart-lung boundary on the magnetocardiogram, 1:23-32

Sick sinus syndrome
deep inspiration induced sinus arrest. An unusual manifestation in a patient with the sick sinus syndrome, 1:91-92

Sinoatrial conduction
sinus node pacemaker shift: a phenomenon induced by premature atrial stimulation in man? 2:137-142

Sinus node pacemaker
sinus node pacemaker shift: a phenomenon induced by premature atrial stimulation in man? 2:137-142

Sinus tachycardia
distinguishing sinus from paroxysmal tachycardia by rate of onset, 3:309 (abstract)

Solid angle theory
a comparison of ST segment deviation and calculated solid angle during acute regional ischemia in the isolated canine heart at precordial, epicardial and intramyocardial lead surfaces, 3:235-246

Somatic variables
the normal pediatric Frank orthogonal electrocardiogram: influence of weight, height and chest circumference, 1:15-22

ST depression
non-invasive detection of coronary artery disease by body surface electrocardiographic mapping after dipyridamole infusion, 3:213-224

ST elevation
experiences from the use of 24 precordial chest leads in suspected acute myocardial infarction, 4:381-388

ST segment
the circumflex coronary artery occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164

ST segment analysis
new applications of computer assisted ST segment analysis, 3:308 (abstract)

ST segment/heart rate slope
a modified treadmill exercise protocol for computer-assisted analysis of the ST segment/heart rate slope: methods and reproducibility, 4:311-318
identification of anatomically extensive coronary disease by the ST/HR slope, 3:308 (abstract)

ST segment mapping
a comparison of ST segment deviation and calculated solid angle during acute regional ischemia in the isolated canine heart at precordial, epicardial and intramyocardial lead surfaces, 3:235-246

Sudden death
the circumflex coronary artery occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164

Sudden death, prediction of
prediction of sudden death from QTc interval prolongation in patients with chronic ischemic heart disease, 3:203-212

Sustained ventricular tachycardia
periodic changes in cycle length of ventricular tachycardia: a Wenckebach type exit block? 4:389-392

Swallowing
paroxysmal supraventricular tachycardia initiated by a swallowing-induced premature atrial beat, 2:193-196

T

T loop
T loop in posterior myocardial infarction: a useful clue to vectorcardiographic diagnosis, 2:109-114
triple antegrade nodal pathway in a patient with supraventricular paroxysmal tachycardia, 1:85-90

Thallium-201
exercise testing and thallium-201 myocardial perfusion scintigraphy in the clinical evaluation of patients with Wolff-Parkinson-White syndrome, 4:319-326
limitations of premature ventricular complex morphology in the diagnosis of myocardial infarction, 2:131-136

Thallium-201 myocardial scintigraphy
electrocardiographic diagnosis of posterior myocardial infarction revisited: a new approach using a multivariate discriminant analysis and Thallium-201 myocardial scintigraphy, 1:33-40

Transmural myocardial ischemia
a comparison of ST segment deviation and calculated solid angle during acute regional ischemia in the isolated canine heart at precordial, epicardial and intramyocardial lead surfaces, 3:235-246

Treadmill exercise
a modified treadmill exercise protocol for computer-assisted analysis of the ST segment/heart rate slope: methods and reproducibility, 4:311-318
non-invasive detection of coronary artery disease by body surface electrocardiographic mapping after dipyridamole infusion, 3:213-224

Triggered activity
effects of oral diltiazem on ventricular premature contractions, 1:59-66

Type I antiarrhythmics
simultaneous appearance of endocardial late potentials and ability to induce sustained ventricular tachycardia after procainamide administration, 2:197-202

U

U wave
postectopic u wave normalization, 3:303-304

Unipositional lead system
comparative study of the normal vector magnetocardiogram and vector electrocardiogram, 3:275-290

V

Vagal reflexes
deep inspiration induced sinus arrest. An unusual manifestation in a patient with the sick sinus syndrome, 1:91-92

VCG in children
the normal pediatric Frank orthogonal electrocardiogram: variations according to age and sex, 1:1-14

Vector electrocardiography
comparative study of the normal vector magnetocardiogram and vector electrocardiogram, 3:275-290

Vector magnetocardiography
comparative study of the normal vector magnetocardiogram and vector electrocardiogram, 3:275-290

Vectorcardiogram
T loop in posterior myocardial infarction: a useful clue to vectorcardiographic diagnosis, 2:109-114

Vectorcardiography
a comparison of cumulated CK release with three vectorcardiographic methods of estimating myocardial infarct size, 4:337-346

Ventricular
arrhythmias
effects of oral diltiazem on ventricular premature contractions, 1:59-66
home monitoring of
home ECG monitoring of the patient with ventricular arrhythmias, 3:308 (abstract)
extrasystoles
mechanisms of concealed ventricular bigeminy: the concept of concealed conduction in the reentrant pathway, 1:67-76
fibrillation
the circumflex coronary artery occlusion canine model of sudden death: methodology and electrocardiographic observations, 2:155-164
tachycardia
escape rhythm and paroxysmal tachyarrhythmia originating from the right bundle, 3:295-298

W

Wenckebach periodicity
periodic changes in cycle length of ventricular tachycardia: a Wenckebach type exit block? 4:389-392

Wolff-Parkinson-White syndrome
exercise testing and thallium-201 myocardial perfusion scintigraphy in the clinical evaluation of patients with Wolff-Parkinson-White syndrome, 4:319-326
increasing pre-excitation ("concertina effect") during vasospastic angina, 3:299-302
